

How to Guide: Confused about which size of pocket door system to choose? We can Help!

Step 1: Measure the available space

Step 2: Choose the standard pocket door frame size that will fit the space (our technical specs include handy size charts)

Step 3: Perhaps you need a wider passage width? Then you might consider a couple of alternative options

Using the Classic Single Pocket Door Systems as an example...

Step1: Measure the overall wall space you have available. The pocket door frame needs to be able to fit within this space as demonstrated below:

Step 2: Look at the sizing table and decide which frame size will fit within the available space and which size door you can use with that frame.

Example 1: Here is an example for a Classic single pocket door system.

Overall wall space/length of partition = 2000mm

Door panel size - Perhaps you would like to use largest possible door panel size to provide the largest passage width possible. From the size chart below for the Classic Single Pocket Door System below you can see that the widest frame size that will fit the space is 1888mm x 2115mm. This will provide a max. passage size of 900mm x 2030mm and will require you to buy a 926mm x 2040mm to fit the pocket door system.
